Best Practices in Telemedicine- Wound Care

Kara S. Couch MS, CRNP, CWCN-AP
Secretary, AAWC

Elaine H. Song MD, PhD, MBA
Co-Chair, Website Committee, AAWC

March 31, 2020

Objectives:

Review the new CMS policy changes related to telemedicine and wound care

Discuss how to conduct a thorough virtual visit

Share templates for triaging patients and documenting a telemedicine visit.

All information regarding regulatory guidance is subject to change during this fluid situation.
Please note the date that the information was accessed under each hyperlink.

Regulatory Issues

Statement from the Alliance of Wound Care Stakeholders (March 20, 2020)

**Wound Care is an Essential – Not Elective – Service that Prevents Hospital Admissions and ED Visits
Among a Fragile Cohort of Patients at High-Risk of COVID-19**

The rapidly evolving COVID-19 pandemic in the United States has hospitals and acute care facilities changing standard operating procedures to prepare for the expected influx of infected patients. As a result, services, procedures, and surgeries that are deemed “non-essential” are being shut down immediately, without thorough consideration of the ramifications.

Hospital outpatient-based wound care departments have been placed in the non-essential group by many hospitals. The Alliance of Wound Care Stakeholders is concerned that this decision will result in **unintended negative consequences** that will cause a gradual influx of patients to the emergency department (ED). Nonhealing wounds, left untreated and unmanaged, can result in significant medical issues including infection, sepsis, the need for limb amputation, and even death. As a result, many procedures provided by wound clinics are **essential – not elective** – to protect the health of patients and prevent an escalation of their disease.

Individuals with chronic wounds (diabetic foot ulcers, pressure ulcers, venous ulcers, arterial ulcers, etc.) commonly have other chronic conditions – typically type 2 diabetes, hypertension, venous insufficiency, peripheral arterial disease, and/or chronic kidney disease. This cohort of fragile patients is high risk if they develop COVID-19, but are also high risk for increased morbidity and mortality – loss of limb or life – if their access to wound care is abruptly discontinued.

Address the COVID-19 pandemic while avoiding unintended consequences for wound patients:

Across the country, wound care providers are working to ensure that the health of our patients is protected during the COVID-19 crisis. We are adopting aggressive infection control and social distancing precautionary measures at our sites and with our staff. While wound care providers are working to limit clinic visits and move as many patients as practical to telehealth, office visits or home health follow-up where appropriate, wound clinics must be able to provide those urgently needed wound care procedures that are infection-sparing, limb-saving and life-saving. These procedures are essential, not “elective,” and ultimately will reduce wound patients’ potential for needing other hospital services such as operative intervention or amputation, which require prolonged hospitalization.

Our position is at this time:

Leave clinics open to manage complex wounds in clinically complex medical patients who are at risk for limb loss, hospital admission, amputation or infections. Hospital administrations should take into consideration input from providers when making these decisions, and deploy appropriate triage criteria when reducing essential clinical services. Enabling continuity of care for these wound patients will improve outcomes while unburdening emergency departments, operating rooms, hospital staff and hospital beds for the COVID-19 crisis. Keeping these patients out of the ED and out of hospital beds can in turn limit exposures and curb COVID-19 infection among this fragile population.

The Alliance has created a task force to help wound clinics and health systems address the evolving realities of the COVID-19 pandemic while avoiding unintended consequences for wound patients. Recommendations will be circulated shortly and can be obtained directly by contacting the Alliance.

The Alliance of Wound Care Stakeholders is a nonprofit multidisciplinary trade association of physician specialty societies and clinical and patient associations, whose mission is to promote evidence-based quality care and access to products and services for people with chronic wounds through advocacy and educational outreach in the regulatory, legislative and public arenas. New Regulations- 3/30/20

- Nurse Practitioners are now allowed to certify/re-certify home health services.- CARES Act (effective 3/28/20)
- Allow simultaneous visits for telehealth and home health on same day (NAHC)
 - CMS will allow the home health agency to visit for the wound care if it is on the HH POC. If the physician wants to conduct a visit as well, CMS did not have a problem with that as long as the HH personnel are not acting as auxiliary staff to the wound clinic. To be clear the simultaneous "visit" can only occur if the patient is a HH patient and the wound is part of the HH POC.

<https://www.cms.gov/about-cms/emergency-preparedness-response-operations/current-emergencies/coronavirus-waivers>

Accessed online 3/31/20

Homebound Status- 3/30/20

- Homebound Definition: A beneficiary is considered homebound when their physician advises them not to leave the home because of a confirmed or suspected COVID-19 diagnosis or if the patient has a condition that makes them more susceptible to contract COVID-19. As a result, if a beneficiary is homebound due to COVID-19 and needs skilled services, an HHA can provide those services under the Medicare Home Health benefit.

Accessed online 3/31/20

DMEPOS

- CMS is waiving signature and proof of delivery requirements for Part B drugs and Durable Medical Equipment when a signature cannot be obtained because of the inability to collect signatures. Suppliers should document in the medical record the appropriate date of delivery and that a signature was not able to be obtained because of COVID-19.
- Where Durable Medical Equipment Prosthetics, Orthotics, and Supplies (DMEPOS) is lost, destroyed, irreparably damaged, or otherwise rendered unusable, DME Medicare Administrative Contractors have the flexibility to waive replacements requirements under Medicare such that the face-to-face requirement, a new physician's order, and new medical necessity documentation are not required. Suppliers must still include a narrative description on the claim explaining the reason why the equipment must be replaced and are reminded to maintain documentation indicating that the DMEPOS was lost, destroyed, irreparably damaged or otherwise rendered unusable or unavailable as a result of the emergency
- Prior Authorization in DMEPOS: CMS is pausing the national Medicare Prior Authorization program for certain DMEPOS items.

<https://www.cms.gov/about-cms/emergency-preparedness-response-operations/current-emergencies/coronavirus-waivers>

Accessed online 3/31/20

Physician Services- 3/30/20

- CMS is waiving the requirement in 42 CFR 483.30 for physicians and non-physician practitioners to perform in-person visits for nursing home residents and allow visits to be conducted, as appropriate, via telehealth options.
- Direct physician supervision is no longer required for non-surgical extended duration therapeutic services provided in hospital outpatient departments and critical access hospitals. Instead, a physician can provide a general level of supervision for these services so that a physician is no longer required to be immediately available in the office suite
- To the extent that a National Coverage Determination (NCD) or Local Coverage Determination (LCD) would otherwise require a face-to-face visit for evaluations and assessments, clinicians would not have to meet those requirements during the public health emergency.

SHIFT IN STANDARDS OF CARE

Pre-Pandemic Model of Wound Care

Healing At All Costs

Evaluation

- Face-to-Face Specialist(s) Evaluation
- Infection Assessment/Labs/Imaging
- Vascular Assessment/Studies
- Diabetes/Nutrition/Biopsy

Procedures

- Regular Surgical/Sharp Debridement
- Invasive Vascular Diagnostics
- Revascularization for most impairments
- Surgical resection of infection
- Surgical closure of wounds
- Surgical offloading
- CTPs

Treatments

- Total contact casts
- NPWT
- Offloading devices
- Compression dressings/pumps
- Advanced Surgical Dressings
- Rx treatments

Follow Up

- Weekly or every 2 weeks

Pandemic Model of Wound Care

Prevention of Hospitalization/
Reduced Utilization
(Management of Wounds)

Triage

Determine which patients need to be seen in which setting and when to escalate

Evaluation

- Face-to-Face Doctor's Office, In Home, Telemedicine
- Infection Assessment (<Labs/<Imaging)
- Vascular Assessment (<Studies)

Procedures

- Change of site of service
- Reduction in procedures (and fewer definitive)
- Infections treated as an outpatient
- Greater tolerance for ischemia
- Greater tolerance for ischemia

Treatments

- Change of site of service
- Greater tolerance for longer healing times
- Greater emphasis on:
 - Advanced Surgical Dressings
 - Home health care
 - Alternative methods of debridement

Follow Up

- Based on Triage

Credit: Lee C. Rogers DPM

Patient Triage

	Conditions	Site of Care	Urgency
Critical (0.25% of patients with diabetes)	<ul style="list-style-type: none"> - IDSA Severe and some Moderate infections - Gas gangrene - SIRS/Sepsis - Acute limb-threatening ischemia 	Hospital	Priority 1 <i>Urgent</i>
Serious (0.75% of patients with diabetes)	<ul style="list-style-type: none"> - IDSA Mild and some Moderate infections (including osteomyelitis) - Chronic limb-threatening ischemia (CLTI) - Dry gangrene - Worsening foot ulcers - Active Charcot foot 	Outpatient Clinic Office-based Lab Surgery Center Podiatrist Office	Priority 2
Guarded (3% of patients with diabetes)	<ul style="list-style-type: none"> - Improving foot ulcer - Inactive Charcot foot (not yet in stable footwear) 	Podiatrist Office Home Telemedicine	Priority 3
Stable (94% of patients with diabetes)	<ul style="list-style-type: none"> - Uncomplicated venous leg ulcer - Recently healed foot ulcer - Inactive Charcot foot (in stable footwear) - Healed amputation - Diabetic foot risk assessments 	Home Telemedicine	Priority 4

Armstrong, (2020) All Feet On Deck—The Role of Podiatry During the COVID-19 Pandemic: *Preventing hospitalizations in an overburdened healthcare system, reducing amputation and death in people with diabetes.* Journal of the American Podiatric Medical Association In-Press.

Level 1-			
Infection			
Postop patients			
Level 2-			
Higher risk if we don't see them as normal			
Level 3-			
Stable			
Can be pushed out 3-4 weeks safely			
Has good home care options/home health			

GW Wound Healing and Limb Preservation Center Triage Model: Created 3/18/20

High Risk Patients

Patients who must be seen

- Patients who are at high risk for infection
- Patients who have necrotic tissue and are actively undergoing serial debridement
- Patients who do not have reliable wound care at home- socioeconomic issues
- Postop patients
- Patients being treated with CTP/TCC/NPWT
- Patients in compression with high drainage
 - Patients in compression with low drainage and stable wraps may consider extending visits to every 2 weeks

Telemedicine Coding/Coverage Guidelines

Consider your payer mix

- Info on Medicare/Medicaid coding and payment to follow
- Do not assume private payers are the same

Summary of Medicare Telemedicine Services

TYPE OF SERVICE	WHAT IS THE SERVICE?	HCPCS/CPT CODE	Patient Relationship with Provider
MEDICARE TELEHEALTH VISITS	A visit with a provider that uses telecommunication systems between a provider and a patient.	<p>Common telehealth services include:</p> <ul style="list-style-type: none"> • 99201-99215 (Office or other outpatient visits) • G0425-G0427 (Telehealth consultations, emergency department or initial inpatient) • G0406-G0408 (Follow-up inpatient telehealth consultations furnished to beneficiaries in hospitals or SNFs) <p>For a complete list: https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/Telehealth-Codes</p>	<p>For new* or established patients.</p> <p>*To the extent the 1135 waiver requires an established relationship, HHS will not conduct audits to ensure that such a prior relationship existed for claims submitted during this public health emergency</p>
VIRTUAL CHECK-IN	A brief (5-10 minutes) check in with your practitioner via telephone or other telecommunications device to decide whether an office visit or other service is needed. A remote evaluation of recorded video and/or images submitted by an established patient.	<ul style="list-style-type: none"> • HCPCS code G2012 • HCPCS code G2010 	For established patients.
E-VISITS	A communication between a patient and their provider through an online patient portal.	<ul style="list-style-type: none"> • 99421 • 99422 • 99423 • G2061 • G2062 • G2063 	For established patients.

Medicaid State Plan Fee-for-Service Payments for Services Delivered Via Telehealth

This document is intended to assist states in understanding policy options for paying Medicaid providers that use telehealth technology to deliver services. The overview and sample state plan language apply to Medicaid fee-for-service payments and additional considerations may be warranted for states interested in offering telehealth within other delivery systems. CMS encourages states to consider telehealth options as a flexibility in combating the COVID-19 pandemic and increasing access to care.

1. Use CPT 99202–99215 for Medicare Part B and Medicare Advantage patients when these services are provided remotely as long as the Public Health Emergency lasts. Some private payers have made the same allowance. Check private payer policies for details.

On March 17, CMS announced that providers can submit CPT 99201–99215 when providing these services remotely. The provider can be in any location and the patient can be in any location. Since that announcement, some private payers have followed suit.

- Must use a communication tool that has interactive audio and video
- Communication tool must allow real time communication
- Providers are permitted to reduce or waive cost-sharing for these services if they wish
- Typical HIPAA guidance does not apply to these services as long as providers are providing these services in good faith
- No modifiers needed
- Use Place of Service “02”
- These will be paid at facility rate
- This waiver is in place as long as the Public Health Emergency lasts
- Postoperative global periods apply
- Document a progress note just like one would do when this service is provided face-to-face. This interaction is an E/M service and the same documentation requirements apply. The level is selected based on the 1995 or 1997 CMS guidelines for Evaluation and Management services.

<https://www.apma.org/emremote> Accessed online 3/29/20

2. Use G2012 when a virtual check-in is provided to a Medicare Part B or Medicare Advantage patient using telephone interactions in addition to synchronous, two-way audio interactions that are enhanced with video or other kinds of data transmission.

- G2012: Brief communication technology-based service, e.g., virtual check-in, by a physician or other qualified health-care professional who can report evaluation and management services, provided to an established patient, not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5–10 minutes of medical discussion
- Can be any type of telecommunication tool, including telephone
- CANNOT relate to any service in the last seven days
- CANNOT result in patient coming in within the next 24 hours or soonest available appointment
- Can only be used for established patients.
- No modifiers needed

****New 3/31/20- can be used for NEW Patients****

<https://www.apma.org/emremote> Accessed online 3/29/20

3. Telephone E/M

- This interaction is an E/M service and documentation must support an E/M just like any other E/M type. Must have history, as much of an evaluation as possible, and some form of medical management
- Explained in the first half of this [webinar](#)
- Must be an established patient
- Must be initiated by established patient or the patient's guardian
- Provider may educate patients about this option
- Not reimbursed by Medicare and some other payers
- CANNOT report if call results in decision to see patient within 24 hours or next available urgent appointment
- CANNOT report if call refers to E/M service performed by same provider within previous seven days
- CANNOT report if call refers to a problem for which a patient is in a global period
- CANNOT report if provider performed a Telephone E/M or Online Digital E/M for same patient for same problem in the last seven days
- CANNOT report if the call is part of Home Care Oversight Services, Care Plan Oversight Services, Home/Outpatient INR Monitoring, ~~Complex Care Management Services, or Transitional Care Management Services~~
 - **CPT 99441: Telephone evaluation and management service by a physician or other qualified health-care professional who may report evaluation and management services provided to an established patient, parent, or guardian not originating from a related E/M service provided within the previous seven days nor leading to an E/M service or procedure within the next 24 hours or soonest available appointment; 5-10 minutes of medical discussion**
 - CPT 99442: ; 11-20 minutes of medical discussion
 - CPT 99443: ; 21-30 minutes of medical discussion

<https://www.apma.org/emremote> Accessed online 3/29/20

4. Online Digital E/M Services

- This interaction is an E/M service and documentation must support an E/M just like any other E/M type. Must have history, as much of an evaluation as possible, and some form of medical management
- Explained in the second half of this [webinar](#) (starting at 9:50)
- Examples of “Digital” platforms:
 - HIPAA-compliant EHR
 - HIPAA-compliant email
 - HIPAA-compliant text
 - Other HIPAA-compliant two-way digital communication
- Must be an established patient
- Must be initiated by established patient via a digital platform
- Provider may educate patients about this option
- Not reimbursed by Medicare and some other payers

<https://www.apma.org/emremote> Accessed online 3/29/20

- CANNOT report if service refers to a problem for which a patient is in a global period
- CANNOT report if service is initiated within seven days of any E/M for same problem.
- CANNOT report if performed on same day as in-person E/M service
- CANNOT report if service is part of Home Care Oversight Services, Care Plan Oversight Services, Home/Outpatient INR Monitoring, Complex Care Management Services, or Transitional Care Management Services
- Time spent is cumulative time over seven days starting with review of the request
- Can only report once per seven day period
- Time includes:
 - Review of inquiry
 - Review of patient records
 - Interaction with other staff
 - Development of management plan
 - Rx
 - Ordering tests
 - Communication with patient
- Add time if multiple providers in same practice perform this service for same patient over same seven day period
- If within **sevendays** of the initiation of an online digital E/M service, a separately reported E/M visit occurs, then the provider work devoted to the online digital E/M service is incorporated into the separately reported E/M visit
- **CPT 99421: Online digital evaluation and management service, for an established patient, for up to seven days, cumulative time during the seven days; 5–10 minutes**
- **CPT 99422: ; 11–20 minutes**
- **CPT 99423: ; 21 or more minutes**

<https://www.apma.org/emremote> Accessed online 3/29/20

Documentation Templates

Consideration of telemedicine visits

- Do you have a Business Associate Agreement?
- Do you have a way to document patient consent for telehealth visit? This must be obtained at each encounter.
- How are you integrating to your EHR?
- Are you HIPPA compliant?
- What can you do if you patients can't telemed?
- Environment for the visit (i.e. what's behind you?), Be dressed professionally

Pearls

- Plan to document in your current EHR as much as possible
- Obtain consent from the patient for a telehealth visit and document in the medical record. Label visit as **TELEHEALTH During COVID19 National Emergency** at the top of your note
- Work out how patients can send images/videos securely
- The patient should have an object of reference to be placed close to the wound (i.e. a quarter)
- Ensure the patient has good lighting
- Test audio/video at the beginning of each visit
- Check your liability insurance to ensure telemedicine is covered

Housekeeping Details

- ID yourself and purpose of the call to check on the patient and their wound. Will take approx. 5 minutes with RN/admin, then provider. Explain about basic telemedicine and future appointments scripting.
- Obtain verbal consent for the encounter and document it in the note.
- Do they have access to a smartphone?
If so, what is the number? (patient must provide)
- Do you have a back-up phone number or secondary contact if we cannot reach you?
If no smartphone do they have access to a computer with internet + camera
- What is the email address? (patient must provide)

Questions for Telephone Visit--General

First, ask the basics (and screen for COVID19):

-How are they feeling?

-Any signs/symptoms of resp illness or GI illness?

-Fever/chills?

How are your blood sugars running?

-Any new or increased pain?

-What's new since we last spoke?

-Any changes in medications?

-Have you had a telemedicine visit with your PCP?

Questions for Telephone Visit- Wound Focused

- Who is doing their wound care and how often
- Do you have supplies? Were they delivered? What do you have?
- Can the patient visualize the wound – If not is there someone there who can assist them (family, aide, HHRN), Do they have a mirror?

How is wound doing:

Is there drainage, how much, has it increased or decreased? What color is the drainage? is there an odor or smell?

Is there redness or swelling?

- Is there undermining or tunneling? (Patients may not understand this)
- Is it firm around the wound?
- What colors are in the wound bed (i.e. red/yellow/black), what are the percentages?
- New areas of wound since we last spoke?

Questions for Telephone Visit- Plan

- Create wound care plan with dressings that last longer than 1 day (consider AWD that have debridement properties)
- Send wound care instructions to patient email vs PDF and scan.
- Consider giving instructions for a “rescue dressing” (provider)
- Consider emailing the Dakins/acetic acid recipe and teaching videos
- If you need additional dressing supplies, **DO NOT GO TO AN URGENT CARE OR ED.** Contact the office immediately for further instructions.
- You may require an in person evaluation. This will be discussed and determined during the telemedicine appointment.
- You will receive a call back to schedule your next appointment in clinic or telemedicine.
- Give Instructions on when to come to the ED/Clinic

Options for Telemed Visits (audio and video)

- FaceTime
- Zoom
- Doxy.Me
- Skype
- Messenger
- Google Hangout
- Wound Reference

- NOT ALLOWED: Tiktok, FaceBook Live, twitch (nothing front facing)

Wound Reference TeleHealth Tool

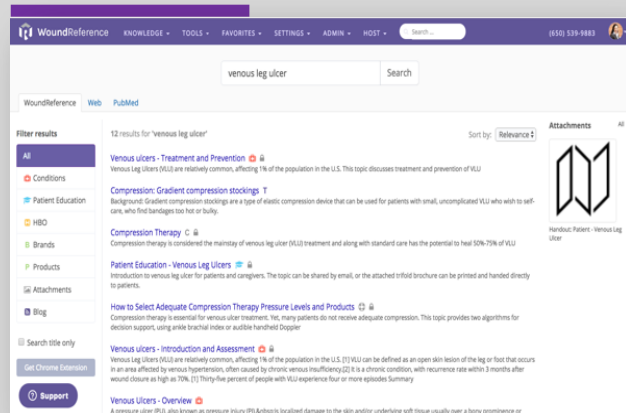

Elaine Song MD, PhD, MBA

What is WoundReference?

WoundReference is a clinical decision support and telemedicine platform for wound care and hyperbaric clinicians at the point-of-care

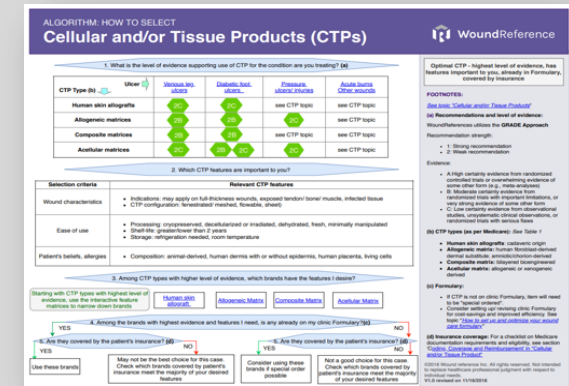

In addition to several resources, WoundReference includes a HIPAA compliant telemedicine tool

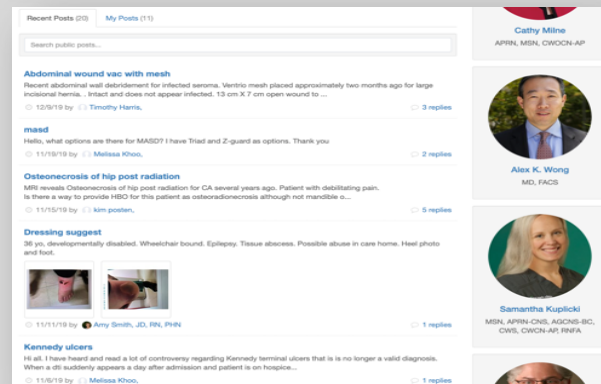

MY Power Search

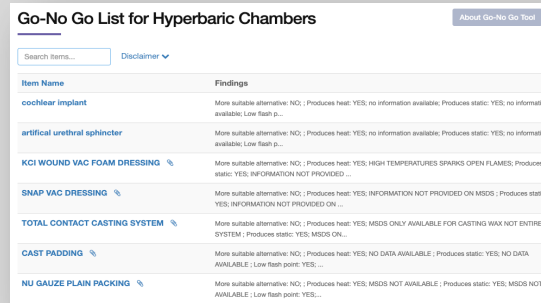

Prep and Dress Tool

Wound Care and HBOT Knowledge Base (CME/CE)

Curbside Consult

HBOT Risk Assessment Tool (Go No-go)

TeleVisit Tool

What are ideal characteristics of a telemedicine app?

- ✓ **HIPAA compliant**
- ✓ **Audio and video (real-time communication)**
- ✓ **No downloads needed**
- ✓ **Patients do not need an account**
- ✓ **Works on desktops, tablets and mobile**
- ✓ **Audit trail, documentation templates to meet CMS telemedicine CPT requirements (Premium Edition)**

WoundReference Offers Free Use of the TeleVisit Tool Video Chat Edition

WoundReference Free TeleVisit Tool Video Chat Edition

How can clinicians utilize telemedicine in wound care?

See topic "[Reimbursement for Telemedicine Services in Wound Care](#)"

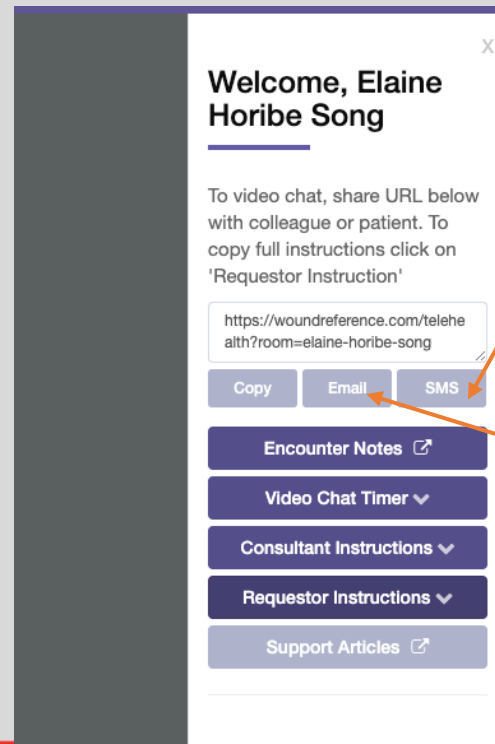

Demo: Patient to provider telemedicine encounter

How can I provide telemedicine services to my patients? (includes documentation – Premium Edition)

6 STEPS

Step 1. Schedule a televisit appointment

1. Patient requests televisit appointment
2. Office/clinician sends the patient a link to the clinician's private virtual room via email or text message (SMS)

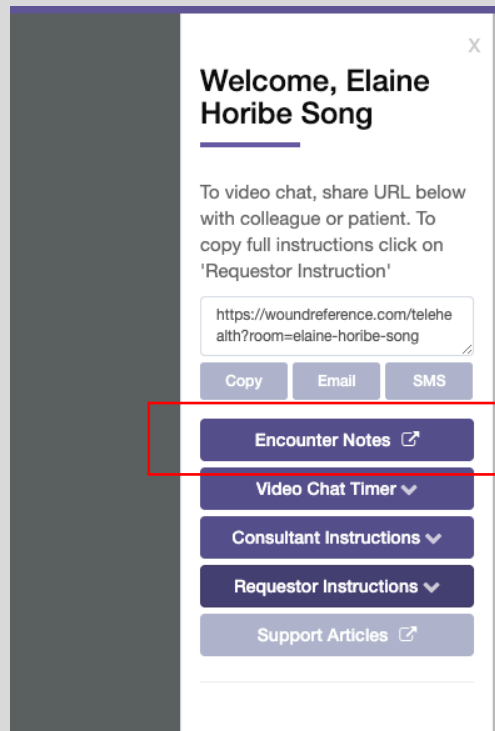

Click to send link to private room via SMS

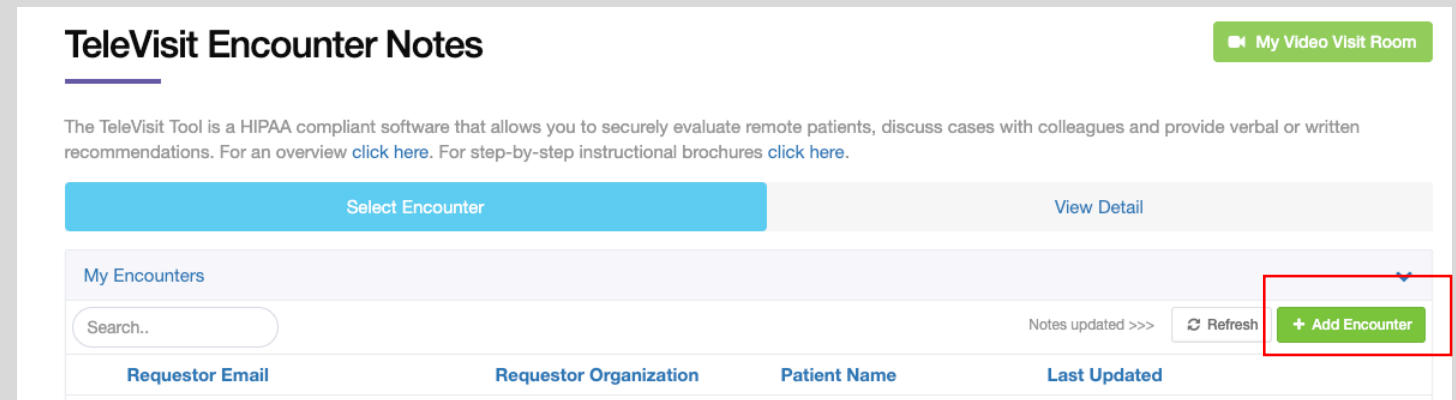

Click to send link to private room via email

Step 2. Prepare for the encounter (optional, if documenting on the TeleVisit Tool)

1. Go to the TeleVisit Tool, click on “Encounter Notes”

2. Create an encounter for your patient ahead of the video call. Enter patient name and email

Step 2. Prepare for the encounter (optional, if documenting on the TeleVisit Tool)

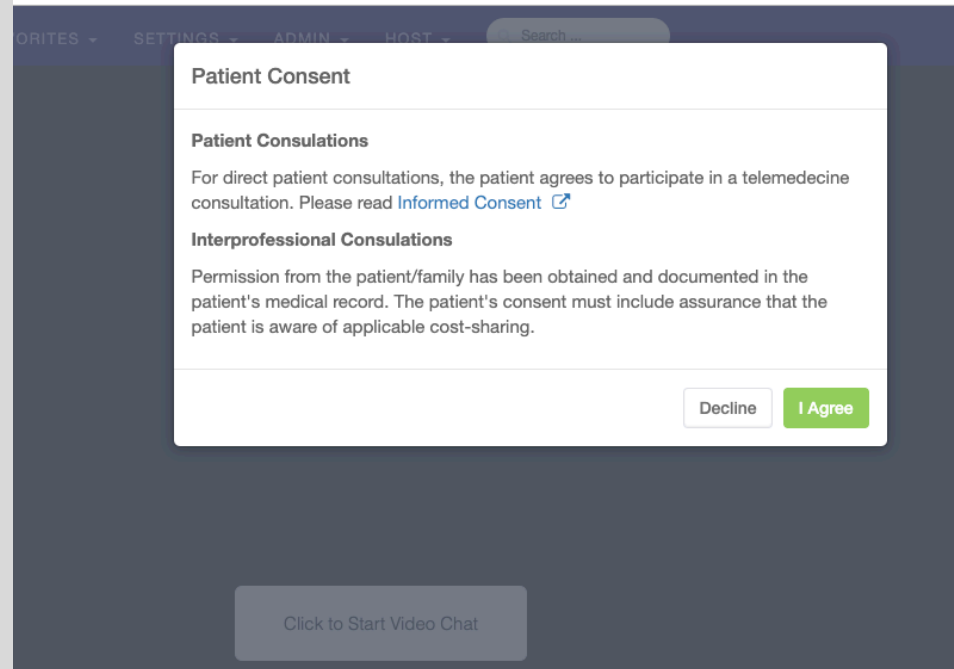

3. Add desired documentation template

The screenshot displays the 'TeleVisit Encounter Notes' interface. At the top right, there is a green button labeled 'My Video Visit Room'. Below this, there are two buttons: 'Select Encounter' and 'View Detail (#426)'. A navigation bar contains five tabs: '1. Encounter Start', '2. Encounter Info', '3. Attachments', '4. Coding', and '5. Report', with '2. Encounter Info' currently selected. A 'History' link is also present. A dropdown menu is open over the '2. Encounter Info' tab, listing various templates. The 'Ulcer Assessment 1' template is highlighted in blue. Other templates include '- Insert Template -', 'Intake form', 'Patient/billing information', 'Video visit instructions', 'Observations on video', 'Ulcer Assessment 2', 'Wound care recommendations', 'Plan', 'ID Intake form', 'ID recommendations', 'Free text', 'CMS Telehealth Encounter (TEST)', and 'Save Default Templates'. The main content area shows a form with a text field containing 'ing at [home/SNF/other] , and being treated at...', a 'requestor form' checkbox, and a section for 'Diagnosis of the wound/ulcer' with radio buttons and dropdown menus for 'Venous leg ulcer', 'Diabetic foot ulcer', and 'Pressure ulcer/injury'.

Step 3. Video call with patient

1. Time spent on verbal discussion automatically tracked and logged
2. Patient is prompted to provide consent to telemedicine service before initiating video call

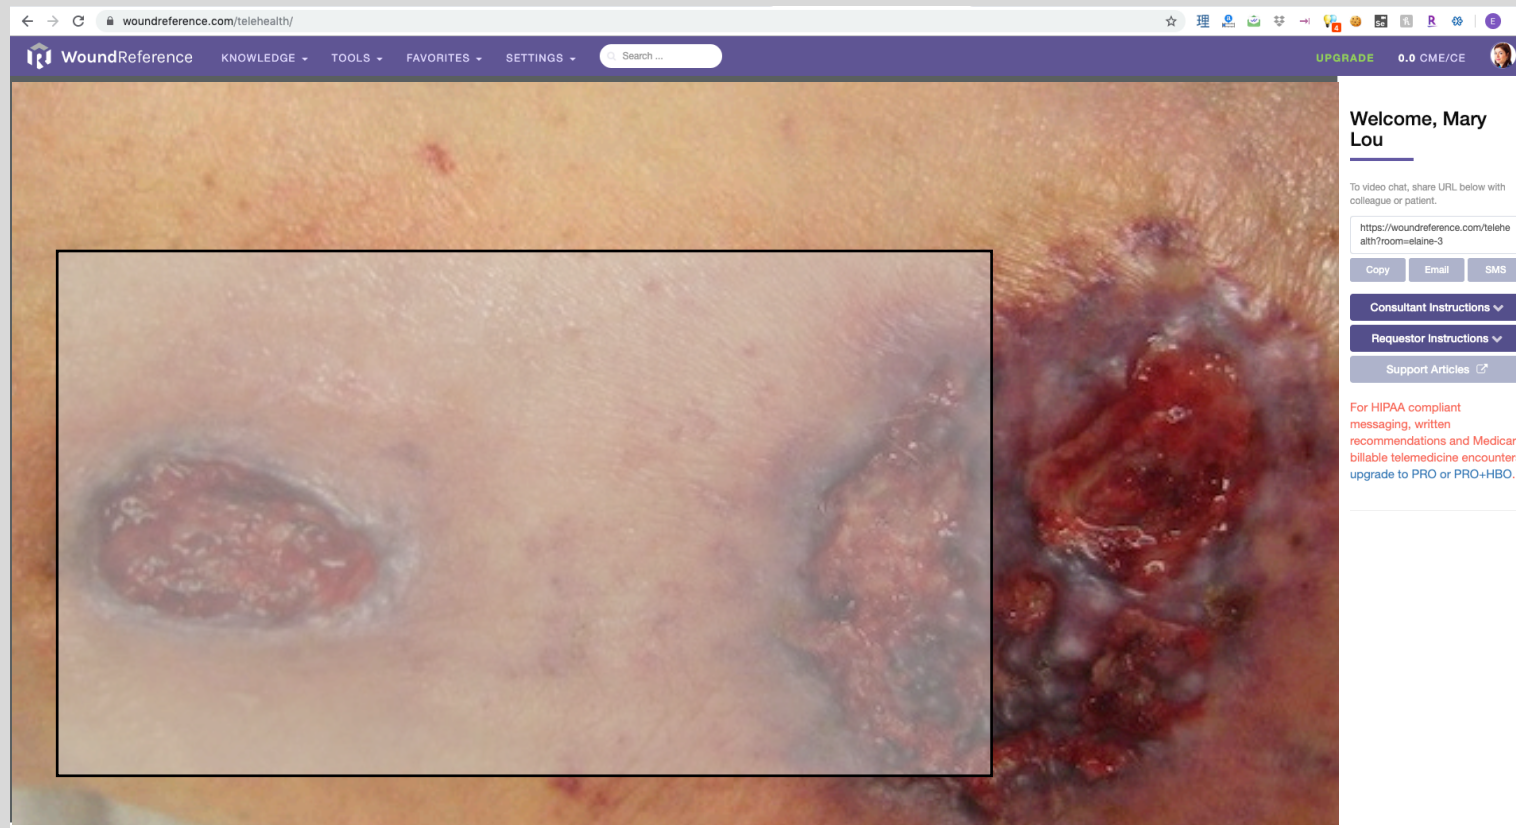

Patient view >>

The screenshot shows a web application interface with a dark blue header containing navigation links: ORITES, SETTINGS, ADMIN, and HOST. A search bar is also present. A white modal dialog box titled "Patient Consent" is centered on the screen. The dialog contains two sections: "Patient Consultations" with a paragraph of text and a link to "Informed Consent", and "Interprofessional Consultations" with another paragraph of text. At the bottom right of the dialog are two buttons: "Decline" and "I Agree". Below the dialog, a grey button labeled "Click to Start Video Chat" is visible.

Step 3. Video call with patient

3. During the video call, get screenshots of the ulcer or documents that the patient shares with you

Step 4. Document encounter, add ICD and CPT codes

TeleVisit Encounter Notes My Video Visit Room

The TeleVisit Tool is a HIPAA compliant software that allows you to securely evaluate remote patients, discuss cases with colleagues and provide verbal or written recommendations. For an overview [click here](#). For step-by-step instructional brochures [click here](#).

****SESSION SUMMARY**** Copy

Patient: Chris Jones
Requestor: Chris Jones (elaine.song@me.com)
Requestor Org: Patient
Video Chat: 2 minutes; Documentation: 5 minutes
CPT Code: .
ICD Codes: L89.006, ., .
Created: 3/19/2020 11:37:02 PM
Last Modified: 3/19/2020 11:41:04 PM

****ASSESSMENT****

****WOUND CARE RECOMMENDATIONS****

APPLY TO THE WOUND BED BEFORE DRESSING
Consultant notes: ewqqw

****PLAN OF CARE****

PLAN FOR OUTPATIENT
Patient requires a multidisciplinary approach, so will need optimization of chronic disease including glucose control, nutritional and perfusion respiratory status, offloading, moist wound care and management of bioburden topically unless systemic therapy is indicated.
Recommend follow up in outpatient wound clinic for serial debridements of nonviable tissue to return wound to acute status :

****GENERAL NOTES****
Consultant notes: qevded

CLICK ON "COPY", THEN PASTE ON YOUR EHR

Save Save & Send Delete Print Refresh ✓ Copied ✓ Success

Step 6. Send summary to patient or clinician (optional)

1. TeleVisit Tool sends link via email to HIPAA compliant area where patient/clinician can access summary (serves as online patient portal)

Virtual visit template if documenting manually

Clinicians may want to use Free TeleVisit Tool Video Chat edition and document encounter manually, directly on own EHR

Gerontology Virtual Visit Progress Note Example

Encounter date 03/19/20 (auto generated)

This service was provided through Telemedicine, using audio/video [***insert modality] due to contact precautions during COVID 19 time period
Provider*** and provider location***
Patient location***

The patient ***gave informed consent for the use of Telemedicine for this visit. The patient understands the risks and benefits of the virtual visit medium. The patient should weigh the advantages such as improved access or convenience against the risks posed by the audio/video communication medium or the limited physical examination.

CC:

HPI:

ROS (smartblock)

PMH

Home Medications

Allergies

OBJECTIVE:

General:

awake, alert, no acute distress

no psychomotor agitation, non-diaphoretic

Head:

atraumatic, normocephalic, no lesions visualized

Eyes:

No redness, discharge, swelling, or lesions

Nose:

No redness, swelling, visible discharge, or deformity

Skin:

no lesions, wounds, erythema, or cyanosis noted on face or hands

Cardiopulmonary:

no increased respiratory effort, speaking in clear sentences, I:E ratio WNL

Neuro:

Cranial nerves grossly normal

speech normal rate and rhythm

orientation arrived to appointment on time with no prompting

moved both upper extremities equally

Gait ***if performed

Psych:

well groomed, pleasant, cooperative

Attention and concentration focused and appropriate

Thought process appropriate

Speech normal rate and rhythm, Affect appropriate, Insight and judgement appropriate

DATA Reviewed:

@ASSESSPLAN@ (problem list and associated orders generate)

Total Audio/Video Face to Face Time: *** minutes.

***Billing Reminders: Encounter must include video AND audio. CPT codes for follow ups with 99213, 99214, 99215 with POS 02 (Medicare) or modifier 95 (commercial insurance). Code based on time or complexity as you would use for a regular office visit.

Telemedicine Coding for Wound Care

Teaching patients how to change dressings at home

Dressing Change Brochure Editor

FREE TOOL

<https://woundreference.com/pated?id=0>

WOUND DRESSING STEPS

- 1) Wash your hands with soap and water. 
- 2) Put on gloves if available. 
- 3) Remove old dressing by lifting the tape across the skin gently. 
- 4) Gently clean wound with circular motions from center to outer edge of wound then pat dry. 
- 5) Apply the skin protection pad to the skin around the wound. 
- 6) Apply the wound treatment as directed. 
- 7) Place the dressing cover over the wound. 
- 8) Secure the dressing in place with tape. 
- 9) Other Notes: _____

What can help my wound?

- **Wash your hands** With soap and water before and after changing your dressing to prevent infection.
- **Keep it covered** Keep your wound covered with a clean dressing.
- **Be careful** Protect your wound from injury by avoiding objects or clothing that can irritate it.
- **Eat right** Eat a well balanced diet to help your body heal.

What is bad for my wound?

- **High blood sugars** Watch your blood sugars and keep them controlled.
- **Smoking** Smoking reduces the supply of oxygen to heal the wound.
- **Infection** Bacteria can infect the wound and lead to serious problems.
- **Dryness** Do not leave your wound open to the air to dry out. Wounds heal faster when kept moist.

What are signs of infection?

Check for infection at every dressing change and seek immediate care for:

- Fevers, chills, nausea or vomiting
- Increased wound pain
- Increased warmth and redness in and around the wound
- Increased swelling around wound
- Increased wound drainage or odor
